## 五、Introduction:

### Introduction

Basify is an interactive data platform designed specifically for baseball fans.

Users can access player and team data for the four major baseball leagues - Taiwan, Japan, Korea and the United States - via a browser on their mobile phone or computer. The platform provides advanced tools for analyzing player performance, evaluating team performance, and supporting custom team creation. Users can also participate in discussions and view the latest baseball reports and related news through the community function, satisfying the needs of all baseball fans.

### **Features**

- Interface friendliness: Basify adopts a minimalist design, with pages designed for baseball data enthusiasts and clear navigation to make it easy for users to quickly find the information they need.
- Interface Compatibility: The platform features a responsive design (RWD) that allows users to enjoy a consistent experience across a wide range of devices (including cell phones, tablets, and computers).
- System Usability: Basify allows novice and experienced baseball fans to quickly and easily look up detailed data, simulate teams, and make game predictions.
- **Expandability**: Using data analytics, Basify can be expanded at any time in the future to meet the data needs of different leagues and baseball games.
- Software Freedom: Users can use Basify in their browser without downloading any application and enjoy real-time data query and community interaction.
